# SPIRULINA PLATENSIS

A microscopic, filamentous cyanobacterium that belongs to the group of microalgae.

#### **SPIRULINA PLATENSIS** UTOPIA - Food of the future **Spirulina microalgae**

#### Spirulina platensis

Spirulina is named for its distinctive spiral structure. One of its most important photosynthetic pigments is phycocyanin, which has numerous positive effects on overall well-being and health. In its natural habitat, spirulina thrives in wetlands and alkaline lakes, where the survival of other microorganisms is often challenging or impossible.

#### SPIRULINA PLATENSIS UTOPIA - Food of the future Abstract

#### **SPIRULINA PLATENSIS** UTOPIA - Food of the future Inspiration

My research revealed insights that emphasized the project's expansion potential and the need to broaden its scope.

"Anthropocene era — the time during which humans have had a substantial impact on the Earth's environment — entails a radical reassessment of what we eat, and how."

> Rima Sabina Aouf - Ten experimental designs that tackle the food challenges of the Anthropocene era, Dezeen, 2022

#### SPIRULINA PLATENSIS UTOPIA - Food of the future Abstract

In the second phase of research and design, the focus will shift to exploring the potential of algae as a food source.

#### **PHOTOBIOREACTOR** Cultivating Spirulina microalgae **Upscale**

Consultations with experts have shown that significant increase in scale is needed to grow the right amount of algae.

In the first design, several small diameter tubes were placed, while in the final design, a single large tube was used to create the required volume.

**FOOD EXPERIMENT** Consumption of Spirulina microalgae **The composition of Spirulina** 

# WHY IS SPIRULINA GOOD FOR US?

#### CULTIVATION

Resistant, undemanding bacteria Doubles in volume every 16-36 hours

### CONSUMPTION

50-70% protein content 30% carbohydrate and fibre content High vitamin and mineral content

#### **FOOD EXPERIMENT** Consumption of Spirulina microalgae **Theoretical research**

![](_page_18_Figure_1.jpeg)

#### To define the elements of the experiment, I set up my own framework, for which it was essential to understand the sensory qualities that determine the nature of the food

# The experiment focused on three main sensory qualities, with texture as the primary parameter.

### Amihud Kramer, 1968

A schematic representation of the sensory quality of food as a finite continuum.

# PRÁD

'SPURKA' Project 1.2

Ingredients:

- 200 g spirulina
- 10 g activa
- 60 g grapeseed oil
- 0,5 g xanthan

Protein/100 g: 15 g
